HEADPHONE SWITCH BOX

A Shure FP32 essential accessory, the headphone switch box improves and simplifies important listening functions, especially when used with video cameras and quick release cables. It also enhances other mixers, such as the PSC M4A+, by adding second recorder monitoring and discrete left/right program in both ears.

FEATURES:

- RTN switch - selects tape monitor return or audio directly from mixer headphone jack.
- L/R Switch -
 - L = left program in both ears
 - R = right program in both ears
 - Center: stereo program
- Small: 2.5" H, 2" W, 1.25"D
- Stainless steel belt clip attached
- 8" input with 90° stereo, 1/4" plug standard

Note:

When tape monitor return signals are mono, as with most Betacams, all three L/R switch positions will sound **mono** in **RTN** position.

WITH OPTIONAL TRANSCRIPTION OUTPUT;
MONO MINI / MIC LEVEL SBT

MODELS:

- **SB/Fc** Front mount with belt clip
- **SB/Sc** Side mount with belt clip
- **SBt/Fc or Sc** with transcription output option; mono mix at mic level, 3.5mm 90° plug, 24"
- Long input; 18" long input cable for PSC M4A+ and other non-FP32 applications - add **LONG** to PN#
- No Clip omit "c", adhesive backed hook and fuzz strip included
